

## PROGRESS IN NIOBIUM AND TANTALUM COORDINATION CHEMISTRY

Rolf W. Berg

Chemistry Department A, The Technical University of Denmark, DK-2800 Lyngby, Denmark

(Received September, 18 1990)

### CONTENTS

1.	Introduction	3
2.	Nb(V) and Ta(V) compounds ( $d^0$ )	5
2.1	Nb(V) and Ta(V) complexes containing only halides	5
2.2	Nb(V) and Ta(V) oxyhalide complexes	10
2.2.1	Oxyfluoride complexes	10
2.2.2	Other Oxyhalide complexes	13
2.3	Nb(V) and Ta(V) peroxyhalide and peroxy-pseudohalide complexes	15
2.4	Nb(V) and Ta(V) chalcogeno-halide complexes	16
2.5	Nb(V) and Ta(V) halide complexes with O-donor ligands	17
2.5.1	Fluoride complexes with O-donor ligands	17
2.5.2	Chloride complexes with O-donor ligands	18
2.5.3	Bromide complexes with O-donor ligands	23
2.6	Nb(V) and Ta(V) halide complexes with N-donor ligands	23
2.7	Nb(V) and Ta(V) oxyhalide complexes with N-donor ligands	28
2.8	Nb(V) and Ta(V) thiohalide complexes with N-donor ligands	31
2.9	Nb(V) and Ta(V) halide complexes with C-donor and other ligands	32
2.10	Nb(V) and Ta(V) pseudo-halide complexes with oxy-donors	33
2.11	Oxides of niobium(V) and tantalum(V)	36
2.12	Heteropolycompounds of Nb(V) and Ta(V)	49
2.13	Perchlorates, sulphates, phosphates and other Oxy-complexes of Nb(V) and Ta(V)	50
2.14	Intercalation of molecules into Nb(V) and Ta(V) oxides	54
2.15	Peroxy-niobates(V) and -tantalates(V)	55
2.16	Nb(V) and Ta(V) sulphides and selenides	55
2.17	Nb(V) and Ta(V) complexes with O-donor ligands	57

2.17.1	Nb(V) and Ta(V) alkoxides	57
2.17.2	Nb(V) and Ta(V) alkenoxides	62
2.17.3	Nb(V) and Ta(V) carboxylates	63
2.18	Nb(V) and Ta(V) complexes with S- and Se-donor ligands	64
2.19	Nb(V) and Ta(V) complexes with O- and S-donor ligands	66
2.20	Nb(V) and Ta(V) oxynitrides and complexes with O- and N-donors	68
2.21	Nb(V) and Ta(V) complexes with As-ligands	71
2.22	Nb(V) and Ta(V) carbides and complexes with C-donor ligands	71
2.23	Biological complexes of Nb(V) and Ta(V)	72
2.24	Solvent extraction of Nb(V) and Ta(V)	73
3.	Nb(V) and Nb(IV) mixed complexes ( $d^0$ and $d^1$ )	74
4.	Nb(IV) and Ta(IV) compounds ( $d^1$ )	75
4.1	Nb(IV) and Ta(IV) halide complexes	75
4.2	Nb(IV) and Ta(IV) oxyhalide complexes	77
4.3	Nb(IV) and Ta(IV) halide complexes with O-donors	77
4.4	Other Nb(IV) and Ta(IV) halide complexes	79
4.5	Nb(IV) and Ta(IV) oxides	80
4.6	Nb(IV) and Ta(IV) complexes with O-donors	80
4.7	Nb(IV) and Ta(IV) sulphides and selenides	81
4.8	Other Nb(IV) and Ta(IV) complexes	84
4.9	Nb(IV) and Ta(IV) complexes with N- and C-donors	84
5.	Mixed Nb(IV) and Nb(III) complexes ( $d^1$ and $d^2$ )	85
6.	Nb(III) and Ta(III) complexes ( $d^2$ )	85
6.1	Nb(III) and Ta(III) halides and halide complexes	85
6.2	Nb(III) and Ta(III) chalcogenohalide complexes	86
6.3	Nb(III) and Ta(III) halides with O- and chalcogen-donors	86
6.4	Nb(III) and Ta(III) halides with N- and P-donors	89
6.5	Nb(III) and Ta(III) halides with C-donors	91
6.6	Nb(III) and Ta(III) oxides, sulphides and selenides	94
6.7	Nb(III) and Ta(III) nitrides	96
6.8	Nb(III) and Ta(III) C-donor complexes	97
7.	Niobium and tantalum clusters of oxidation state < III	97
8.	Nb(II) and Ta(II) complexes ( $d^3$ )	102
9.	Nb(I) and Ta(I) complexes ( $d^4$ )	102
10.	Nb(0) and Ta(0) complexes and alloys ( $d^5$ )	104
11.	Niobium and tantalum in oxidation states below 0	105
12.	Compounds of unknown oxidation state	106
